2. The following is an examiner's statement of reasons for allowance: The present invention is directed to a remote chime assembly. Each independent claim identifies the uniquely distinct features "a transmitter for transmitting activation signal to the receiver, and a transmitter actuator connectable to said doorbell primary activation circuit, the transmitter actuator including voltage storing means connected to the transmitter for independently actuating the transmitter with its stored voltage in conjunction with activation of said doorbell, the stored voltage accessed from the first power source" and "a second power source connected to said transmitter for powering the transmitter independently of said first doorbell power source" in combination with the manner claimed.
